

## PROPER ${ }^{\text {w" }}$

Real. Genuine. Actual. True. Bona Fide.

These synonyms all apply to the newest linear ambient lighting solution from Peerless ${ }^{\circledR}$. Proper continues the longstanding Peerless ${ }^{\circledR}$ mission of providing high quality architectural-grade lighting that is accessible to everyone.

Proper is distinguished by its continuous luminous lens that can run, uninterrupted, up to 100 linear feet without breaks or seams.

## A Human-centric Solution

LOW
UGR

The continuous lens measures $5^{\prime \prime}$ in width to minimize glare from the aperture. The overall fixture measures $71 / 2^{\prime \prime}$ wide by $21 / 2^{\prime \prime}$ tall, allowing greater spacing between the light source and lens to provide optimal distribution and uniformity.

## Visual Comfort

Direct and indirect luminaires work in harmony to create the most efficient and comfortable combination of ambient illumination for a space.

## Power to the People

Available Tunable White options provide ambient illumination levels and controls that are essential for task lighting. Proper is available with two Tunable White ranges; Productivity (3000K - 5000K) and Rhythm (2700K - 6500K). Additionally, scalable networked lighting controls solutions are made possible with available sensor technology paired with nLight ${ }^{\circledR}$ enabled luminaires

## Adjustable Suspension

An adjustable Y-yoke suspension with sliding tracks on both sides of the luminaire, paired with PrecisionLock alignment technology to enable seamless alignment of each fixture section, makes Proper a breeze to install. A patented lens installation tool is included for applications greater than 8 feet in length.

## Two Endcap Styles

Proper is available in your choice of square or contoured end caps, furthering its ability to blend into the application, not compete with it.
